

ALL ABOUT TIME/DID YOU KNOW?!

The proof for a Designers voice is agreed upon MANY in the scientific community.

God is **unlimited** in greatness - God is eternal - He is unbound by anything - He is above all! (Ephesians 4:6)

Key verse:

*“For since the creation of the world
His invisible attributes, His eternal power and divine nature, have been clearly seen,
being understood through what has been made, so that they (humanity) are without excuse”*
(Romans 1:20)

That “I just can’t believe” has been *replaced* by “I will not believe.”

In this incredible age of expanding knowledge we are once again finding the **fingerprint** of the designer in the most inconvenient places (for those who wish to deny a Designer).

The **uncaused emergence** of something out of nothing has never been scientifically observed.

There are 100 billion stars or suns in **our galaxy alone** (the Milky Way - sounds delicious :)

The Milky way is 588 with 16 zeros miles across or **100 light years** across
(A light year is the time it takes light to travel through space in a year/about 6 trillion miles!)
God is huge!

Andromeda (our closest neighbor galaxy) is 2.2 million light years away - if we sent a radio message there we would have to wait 4,400,000 years for a reply. Incredibly vast!

There is no fence - if anything - recent astronomy has demonstrated that there is no end to the observable cosmos. (read up on the Hubbell Telescope data if you haven’t.

We live on an incredibly protected planet in a finely tuned circumstance to sustain life: *water* for life, moderated *weather* extremes, the intricate balance of the moon and our tides et al for atmospheric conditions.

The Earth has **26 protective atmospheric layers** to make it suitable and sustainable for life.

Our finely designed **magnetic shield** protects our planet from destruction by space debris.

The earth is in the perfect, **non-busy** place in the cosmos for us to live and observe the stars around us.

Finding a planet the right size to match the earth’s ability is the smallest challenge - there is so much ***fine-tuning*** that make the earth habitable that is mind-blowing (when you get into it)
